                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MISCELLANEOUS: NDK, ISOLATED FROM A ZAIRIAN PATIENT AIDS, AND IS A HIGHLY CYTOPATHOGENIC STRAIN. SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY. BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

THE P24 PROTEIN IS PHOSPHORYLATED.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 KARVLAEAM 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.
                                                                                                                                                                                                                                                                               S Res. Hum. Retroviruses 3:57-69(1987).

S Res. Hum. Retroviruses 3:57-69(1987).

FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

AIDS Res. Hum. Retroviruses 5:411-419(1989).
-1- FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURAPTION, AND INFECTION STACES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAGG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.
-1- PTM: THE P24 PROTEIN IS PHOSPHORYLATED.
-1- SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CHAIN

Hum. Retroviruses 10:1143-1155(1994).

AIDS Res. Hum. Retroviruses 10:1143-1155(1994).

-i- FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STACES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELE-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN INMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BUDDING OF AN INMATURE VIRION FROM THE INFECTED CELL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CHAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2 KARVLAEAM
                                                                                                                                                                                                                                                                                  FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INFECTION STRACES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVEL BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA. PM: THE P24 PROTEIN IS PHOSPHORVLATED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ANAGI S., Chen I.S.Y.;

mitted (DEC-1998) to the HIV data bank.

function: performs Highly Complex orchestrated tasks during the function. Performs Highly Complex orchestrated tasks during the restance of the Viral ASSEMBLY, BUDDING, MATURATION, AND INFECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATION THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA.

PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

SIMILARITY: CONTAINS 2 CCHC-TYPE ZINC FINGERS.

                                                                                                                                                                                                                                                                                                            FUNCTION: PERFORMS HIGHLY COMPLEX ORCHESTRATED TASKS DURING THE ASSEMBLY, BUDDING, MATURATION, AND INTECTION STAGES OF THE VIRAL REPLICATION CYCLE. DURING VIRAL ASSEMBLY, THE PROTEINS FORM MEMBRANE ASSOCIATIONS AND SELF-ASSOCIATIONS THAT ULTIMATELY RESULT IN BUDDING OF AN IMMATURE VIRION FROM THE INFECTED CELL. GAG PRECURSORS ALSO FUNCTION DURING VIRAL ASSEMBLY TO SELECTIVELY BIND AND PACKAGE TWO PLUS STRANDS OF GENOMIC RNA. PTM: THE P24 PROTEIN IS PHOSPHORYLATED.

gag polyprotein - human immunodeficiency virus type 1 (isolate IV)
N;Alternate names: assemblin; core polyprotein; gag precursor
N;Contains: capsid antigen core protein p24CA; core protein p1; core protein p6; matrix
C;Species: human immunodeficiency virus type 1, HIV-1
C;Date: 17-May-1985 #sequence_revision 17-May-1985 #text_change 05-Dec-1998
C;Accession: A03948
R;Muesing, M.A.; Smith, D.H.; Cabradilla, C.D.; Benton, C.V.; Lasky, L.A.; Capon, D.J.
Nature 313, 450-458, 1985
A;Title: Nucleic acid structure and expression of the human AIDS/lymphadenopathy retrov
A;Reference number: A93355; MUID:85111157; PMID:2982104
A;Accession: A03948
A;Residues: 1-478 <AUE>
C;Genetics:
A;Genetics:
A;Genetics: ADS; blocked amino end; core protein; immunodeficiency; lipoprotein; myris
F;2-478/Product: gag precursor (assemblin) #status predicted <P17>
F;2-132/Product: matrix antigen core protein p17MA #status predicted <P17>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polyprotein - human immunodeficiency virus type 1

gag polyprotein - human immunodeficiency virus type 1 (strain MN)
N;Alternate names: core polyprotein
N;Contains: core protein p1; core protein p17; core protein p2; core protein p24; cor
C;Species: human immunodeficiency virus type 1, HIV-1
A;Note: host Homo sapiens (man)
C;Date: 30-Sep-1993 *sequence_revision 30-Sep-1993 *text_change 26-Feb-1999
C;Accession: A38068
R;Henderson, L.E.; Bowers, M.A.; Sowder II, R.C.; Serabyn, S.A.; Johnson, D.G.; Bess
J. Virol. 66, 1856-1865, 1992
A;Title: Gag proteins of the highly replicative MN strain of human immunodeficiency v
A;Accession: A38068
A;Molecule type: protein
A;Residues: 1-506 <HEN>
C;Genetics:
                                                                                                                                                        A;Gene: gag
C;Superfamily: AIDS-related virus gag polyprotein
C;Superfamily: AIDS; core protein; immunodeficiency; polyprotein
C;Keywords: AIDS; core protein p17 #status experimental <P17>

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB DB

R/Alternate names: core polyprotein

N/Contains: core protein pl5; core protein pl7; core protein p24

C/Species: human immunodeficiency virus type 1, HTV-1

A/Note: host Homo sapiens (man)

C/Date: 30-Sep-1991 *sequence_revision 30-Sep-1991 *text_change 16-Jul-1999

C/Accession: J00065
